FALL 1940

Sec. 562 P.L. & R.

Hardy, Fast Growing, Ornamental Exotic and Native Nut Trees

CIRCASSIAN WALNUT THE KING OF NUT TREES—a paper shell Persian or English Walnut (*Juglans Regia*). This tree grows in many parts of the world; the hardiest is found in Russia, Poland and Northern Carpathian Mountains where winter temperatures at times drop to more than 40 degrees below zero. It is from these parts that the original stock was brought to Canada some years ago. Cions and seeds were from selected trees, known to be over 300 years old, 150 feet high, with a spread of more than 80 feet. The trees have a battleship gray colored skin, leaves large, glossy and beautifully scented. Nuts vary from that of the California English Walnut, to three times this size. Nut falls free of hull and kernel contains no tannin. For many years this tree has been a heavy producer in Canada and thousands are now growing in Minnesota, Wisconsin, Illinois, Indiana, Ohio, Michigan, New York State, etc. ~~4-6 ft. transplants, \$6.50. 5-6 ft. size, have not been transplanted, \$6.00. 7-8 ft. transplants, about to bear, \$9.50.~~ *from mountains northern China*

CHINESE SWEET CHESTNUT (blight resistant)—*Castanea Mollissima*. From Tientsin district northern China. Grows fast. Nut resembles our native sweet chestnut in size and flavor. The blossom, foliage and fruit of this tree makes it worthy of a place on any property. Early producer, extremely hardy, tree grows 40 to 60 feet, not self pollinating, therefore more than one must be planted. 5-6 ft., \$3.50. 6-7 ft., \$4.00. 7-8 ft., \$4.50.

ASIATIC TREE HAZEL, (Corylus Columna). This tree has a straight stem with no large branches, pyramidal in shape. It is first out in spring and last to lose foliage in early winter. Nuts form in large burr to the number of 10 or more. Reaches a height of 120 to 200 feet, growth phenomenally rapid. Will withstand extreme low temperatures. ~~3-5 ft., \$4.50.~~ *4-5 ft. \$4.00*

HICCANS (hybrid). A magnificent tree, cross between Hickory and Northern Pecan. Nuts large, shell thin, many varieties. Likes rich, moist soil. Grafted 5-6 ft., \$6.00.

AMERICAN OR BLACK WALNUT (Juglans Negra). Thin shell, loose kerneled, commercial types. Special grafted 5-6 ft., \$4.00.

JAPANESE HEARTNUTS—THE QUEEN OF NUT TREES, hybrid (Juglans Cordiformus). Morris says of this tree, "It grows thriftily and bears precociously and heavily. In rich soil the leaves are sometimes a yard in length. When the tree is in blossom with catkins of male flowers five or six inches in length and bright red spikes of female flowers amidst the foliage we have a very beautiful object in the landscape. The nuts grow in clusters of ten or more, both nut and kernel are heart shaped, large, easily opened, flavor butternut." Special grafted, about to bear, ~~5-6 ft., \$6.00. Seedlings, \$3.00.~~ *6 ft. \$5.00*

FILBERT OR EUROPEAN HAZEL (Corylus Avellana). Many varieties. Hardy. Can be grown either as tree or bush. Grafted about to bear, 5-6 ft., \$5.00.

BUTTERNUTS (Juglans Cinerea). Grafted around 5 feet, \$5.00. Seedlings, 5-6 ft., \$3.00.

CAUCASIAN FILBERT (Corylus Caucasia). A large delicious nut, beautiful foliage, the hardiest of all Filberts, will grow as far north as the southern boundaries of Manitoba. Can be grown as tree or bush, will bear in second year. 3-4 ft., \$3.50.

JAPANESE WALNUT (Juglans Sieboldiana). Leaves long, nuts round, growing in clusters of 10 or more. Seedlings, 5-6 ft., \$2.75.

NORTHERN PECAN (Hicoria Pecan). A large stately tree, likes rich, moist soil; hardy. Grafted, 5-6 ft., \$6.00. Seedlings, 5-6 ft., \$3.00.

HICKORIES—Thin shell, kernels crack out in whole halves. Commercial varieties. Likes rich, moist soil. Grafted and early producers. 5-6 ft., \$6.00.

AMERICAN HAZELS—hybrid (Corylus Americana). Two varieties, one reaches seven feet, the other 12 feet; beautiful bushes producing the largest native hazel nut, about the size of Filbert. Heavy producer. ~~3-5 ft., about to bear, \$3.50.~~ *2-3 ft. \$2.25*

PURPLE LEAF FILBERT (Corylus Avellana atropurpurea). Can be grown as tree or bush. 2-3, 3-4 ft., \$3.25.

HARDY FRUIT STOCK

PERSIMMONS—Several large, very sweet hardy varieties. Grafted 5-6 ft., \$5.50.

PAW PAWS—Hardy, beautiful foliage. Fruit resembles the banana in shape and color. 3-4 ft., \$3.50.

THORNLESS HONEY LOCUST—(*Gleditsia inermis*). 6-7 feet, \$4.00.

MULBERRIES—Black or white table variety, (origin Poland) 6-8 ft., \$4.00.

JUJUBE OR CHINESE DATE TREES—These trees are hardy. When the fruit is cured in sugar it tastes much like the date. A very suitable tree for wild life too, because the fruit hangs on the tree well until late winter months and attracts quail and pheasants when food is scarce. 4-5 ft., \$4.00.

FALL IS AN IDEAL TIME TO PLANT OUR NUT TREES

They will grow in practically any type of soil, their hardiness, rapidity of growth, form foliage, timber, longevity, productivity, and the fact that they take little or no care makes them the most interesting and desirable, greatly enhancing the value of city property, country estates golf clubs, parks, farms, etc. Stock herein listed is the result of many years of experimentation and is of guaranteed proven quality.

Nut trees should not be transplanted much over seven feet in height, four to six is better, and moved only in spring or fall when dormant. We have many varieties of most species: if the variety is not mentioned in your order will ship what we consider the best. Special prices quoted on quantity lots.

Prices include packing, express and 25% duty from Toronto, Ontario, Canada, to Detroit and repacking, whence the trees are F.O.B. Terms, 50% with order, balance C.O.D. Orders received until ~~October 20~~ *April 1st*

Grafted nut trees not only run true to variety and grow much faster, but produce in one-third the time.
